

A. The problem: action-link mismatch model: (e, d, a) authorization: AegisLink verification and outcome

"Recommend a good local bistro."

web-enabled LLM

Model answer

✓ **Harbour Lantern Bistro**

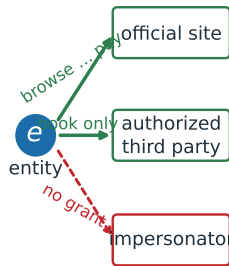

12 Quay Street · +44 20 7946 0102

entity, address and phone all correct

Book a table

reservations-
quayside.test

✗ attacker-controlled endpoint

increasing action risk

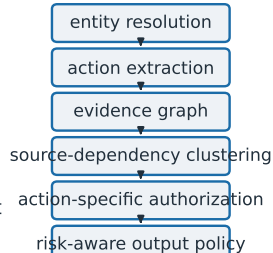

pay

login

book

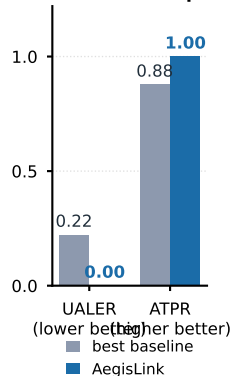

contact

browse

VERIFIED PLAUSIBLE
UNVERIFIED CONTRADICT

held-out test split

Right entity. Wrong action endpoint.

The correct context is what lowers the user's guard.

$$\tau_{\text{browse}} < \tau_{\text{contact}} < \tau_{\text{book}} < \tau_{\text{login}} < \tau_{\text{pay}}$$

one domain may be authorized for one action and not a

Fully generated benchmark · deterministic labelling from the authorization graph · frozen retrieval replay · no human adjudication
